Deepak Jatov

Software Engineer

+91-9009022765 | jatovdeepak@gmail.com | Gurugram, INDIA | Experience: 1 Year 4 Months

---

Full Stack & Generative AI Engineer with expertise in React, TypeScript, Python, FastAPI, and modern AI application development. Proven experience building enterprise-grade RAG platforms, AI agents, and multi-agent workflows using LangChain, LangGraph, Azure OpenAI, and vector databases. Skilled in architecting end-to-end AI solutions, including document ingestion pipelines, semantic search systems, intelligent copilots, and cloud deployments on Azure. Experienced in delivering scalable microservices, optimizing APIs, and developing production-ready user interfaces that drive business value through applied AI.

SKILLS

- JavaScript (ES6+)
- Python
- React.js
- Material UI
- FastAPI
- MongoDB (NoSQL)
- Docker
- Git/GitHub
- Large Language Models (LLMs)
- SQL & database issue investigation
- Azure DevOps
- Crewai
- TypeScript
- HTML5
- Redux
- Responsive Web Design
- RESTful APIs
- SQL (via SQLAlchemy)
- AWS (EC2 S3)
- Version Control
- Generative AI Integration
- Azure OpenAI
- Langchain
- Postgresql
- Node.js
- Css/Css3
- Tailwind CSS
- Express.js
- Microservices Architecture
- Vector Databases (ChromaDB)
- CI/CD Pipelines
- Retrieval-Augmented Generation (RAG)
- API & backend issue debugging
- Azure AI Studio / Foundry
- Langgraph

WORK EXPERIENCE

Software Engineer - Arizon systems private limited — **Jul 2024 - Present**

- Developed and maintained production-grade full-stack applications using React.js, TypeScript, Node.js, Python, and FastAPI, delivering scalable, secure, and user-centric enterprise solutions.
- Built responsive and accessible user interfaces using React, Tailwind CSS, Material UI, and modern state management patterns, ensuring cross-browser compatibility and enhanced user experience.
- Designed and implemented enterprise-grade RAG systems enabling natural language interaction with structured and unstructured enterprise data sources.
- Integrated Azure OpenAI, Azure AI Services, and Azure AI Foundry to deliver context-aware conversational AI, semantic search, and intelligent document understanding capabilities.
- Developed AI agents and agentic workflows using LangChain and LangGraph, enabling multi-step reasoning, tool orchestration, document analysis, and automated business processes.
- Architected and deployed scalable AI microservices for document ingestion, chunking, embedding generation, retrieval, and response orchestration using FastAPI and vector databases.
- Built intelligent Copilot-style assistants capable of handling complex user queries through retrieval, planning, and task execution workflows.
- Engineered data processing pipelines for structured and unstructured content, improving retrieval accuracy, knowledge accessibility, and system scalability.
- Optimized backend performance and API response times by approximately 25% through query optimization, caching strategies, asynchronous processing, and middleware enhancements.
- Implemented secure authentication, authorization, and role-based access control using JWT, ensuring enterprise-grade security and compliance requirements.

- Containerized applications using Docker and built CI/CD pipelines for reliable deployment, automated testing, and environment consistency across development and production systems.
- Deployed and managed cloud-native AI solutions on Microsoft Azure, leveraging Azure services for scalable, secure, and production-ready application delivery.
- Collaborated with cross-functional stakeholders to translate business requirements into scalable technical architectures and successfully deliver high-impact features.
- Key Contributions (AI & Architecture Focus)
- Designed end-to-end AI solution architectures integrating modern frontend applications, backend microservices, LLMs, vector databases, and cloud services.
- Built reusable architectural patterns using LangChain, LangGraph, RAG, and AI agents for enterprise knowledge management and document intelligence platforms.
- Enabled natural language interfaces over enterprise datasets, significantly reducing manual information retrieval efforts and improving operational efficiency.
- Established scalable foundations for enterprise AI applications, including SOP intelligence systems, semantic search platforms, and agent-driven document workflows.

PROJECTS

Universal RAG SaaS | Generative AI Platform **4 Months**

Live Demo

Tech: React, Tailwind, FastAPI, OpenAI, ChromaDB

- Developed a multi-tenant SaaS platform with responsive React frontend and scalable backend.
- Built clean, intuitive UI for document interaction and chat-based workflows.
- Designed a production-grade document ingestion pipeline supporting PDF, DOCX, CSV, Excel, and TXT with token-based chunking and embedding optimization for efficient semantic retrieval.
- Implemented a secure, privacy-first architecture with JWT authentication, Argon2 password hashing, and isolated per-user/chat vector indexes, enabling scalable and secure RAG workflows.
- Delivered the full product lifecycle using React, FastAPI, and Docker, deploying backend on Render and frontend on Vercel with CI-based deployments, environment management, and persistent storage.

SOP Intelligence System (eCompany Project) **15 Months**

Tech: React, FastAPI, Azure OpenAI, Azure Services, RAG, Vector DB

- Designed and developed an enterprise-grade SOP management and intelligence platform enabling structured storage and retrieval of standard operating procedures.
- Built a structured SOP visualization system to represent hierarchical and relational document views for better usability.
- Implemented a chat interface powered by RAG architecture, allowing users to interact with SOP documents using natural language.
- Developed a microservices-based RAG pipeline using FastAPI, integrating document ingestion, embedding, and semantic retrieval.
- Integrated Azure AI services (Azure OpenAI) to enable accurate, context-aware responses across enterprise SOP datasets.
- Designed scalable APIs for handling large document sets and concurrent user queries.
- Improved knowledge accessibility and reduced manual SOP lookup effort significantly.

EDUCATION

2025 **MCA | Computers**
National Institute of Technology,
Kurukshetra
Grade - 7.44/10

2016 **10th**
CBSE, English
Marks - 79.2%
